care for the common home

How can we practice being at peace with creation?

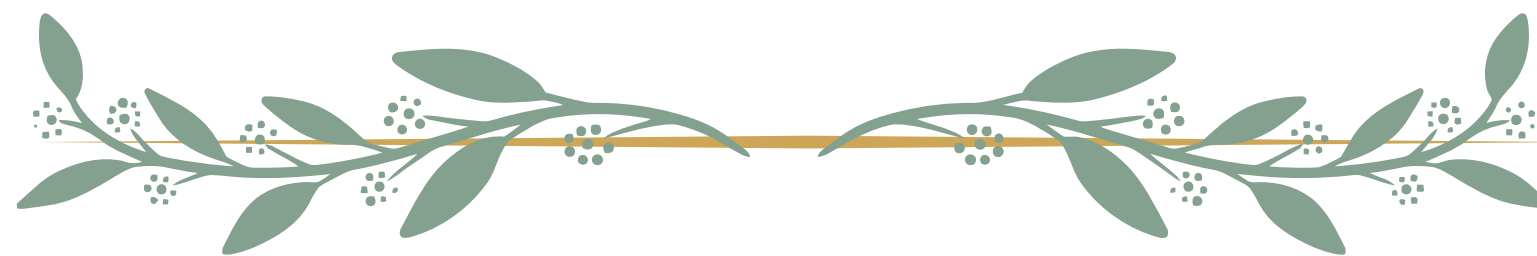

Everybody on this earth is a child of god, so we are called to look after his creation that he made for us, but how do we do that? When god gave us this earth, it was a gift to all living creatures on earth, and he put us in charge. So we need to start adapting to this change! We could simply slightly modify our daily lives to be more eco-friendly. First of all, we should stop using so much plastic and use other materials that can be used for multiple purposes. We could also think about people in need a lot more. Unfortunately, in the modern day, people are suffering, but they are not getting as much attention as they deserve. They suffer from things like poverty, starvation, and problems with climate change. Although some problems won't be so simple to fix, such as wars and unequal rights. These things are going to take a while to fix, so why don't we start now? On this mission to ensure peace with the world and God (because he is surely disappointed). so lets starte with the littile thing even if that means piucking up rubbish on the ide of the road or maybe getting souler pannels so we dont use as much cole(uing m ore coal energy makes air pollution) if that is sothing you can do its good enough!

All of us can cooperate as instruments of God for the care of creation, each according to his or her own culture, experience, involvements and talents”

This Ludato si quote should be our inspiration when living our lives because it displays the talent and culture we humans have formed, but it also shows that if we as a nation form together, we can do great things, especially in the eyes of the lord. God didn't make us to do things like pollution and deforestation; he made us to support the earth. These quotes are connected to what I drew because they show that we can make this world a better place. After all, we are God's creations, and we need to start moving because the world just keeps going downhill.

In my piece in the middle, there is an earth, and on it, there is a lady who is acting through God's name and being smart with the way she is recycling. For example, she is planting new plants which will help the air and animals to maybe find new homes. There are also windmills behind her, which is something that will definitely help with finding a good source of energy that doesn't harm our earth anymore. There is also a recycling bin, which I put in there to show how putting your correct rubbish in the right bin can make such a big difference due to pollution. Do not forget it also displays the bad things that we seem to accidentally do. chooping down trees, (to build stuff with the space), how climate change, and using unacceptable gas. showing the importance of visuale representation ecoreging peopleee
